It response is FHM-10-N: Receptor for cysteinyl leakotrienes. The response is mediated via a G protein that activates a phosphatidylinositul-calcium second messenger system. Stimulation by BAY u9773, a partial advoist induces specific confiractions of pulmonary veins and might also have an indirect role in the relaxation of the pulmonary vascular endothelium. The rank order of affinities for the confiractions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CETZ BUMAN

FUNCTION: Peopptor for cysteinyl leukotrienes. The response is mediated via a G-protein that activates a phosphatidylinositol calcium second messenger system. The rank order of affinities the leukotrienes is LTC4 - LTE4 - LTE4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SHROWLIMIAR LOCATION: Integral membrane protein.

EBV-induced G-protein coupled receptor (EBI-2) polypeptide.
                                       22.FEB-1999 (first entry)
                                                                                                                                                       _
```

EBV-induced G-protein coupled receptor; EBI-2: Epstein-Barr Virus; ulcer; endothelium-differentiation gene. EDG-1-like G-protein coupled receptor; recombinant; agonist; asthma, Farkinson's disease, heart failure, asthma, hypotension; urinary retention; osteoporosis; antagonist; hyportension; angina pectoris; myocardial infarction; allergy, psychosis; depression; migraine; vomiting; stroke; eating disorder; migraine headache; cancer; prostatic hypertrophy; detection; drug screening.

Homo sapiens

The encoding DNA is deposited under the accession number APCC No. 200003. The invention provides two human G-protein coupled receptor polypeptides. The polypeptides are human Epstein-Barr Virus (EBV) induced G protein coupled receptor, designated EBI-2 polypeptide and a human endothelium-differentiation gene (EDG) like G-protein coupled receptor, designated EBI-1 polypeptide and a human endothelium-differentiation gene (EDG) like G-protein coupled receptor.
Human orphan G protein coupled receptor hCHN8
                                                                         02 NOV 2000 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         to transform host cells for the recombinant production of the proteins. Advantsts for G-protein coupled receptors can be used for the treatment of asthma, Parkinson's disease, acute heart failure, hypotension, urinary retention and osteroporosis. Antagonists can be used for the treatment of hyperfension, angina pectoris, myocardial infarction, ulcers, asthma, allerdies, psychoses, depression, migraine, vomiting, stroke, eating districtions are considered as the constitution of the 
                                                                                                                                                                                                                                                      AAY71306 standard; Protein; 342 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SCI COLING.

                                                                                                                                                                                   alpha helices with an extracellular N terminus and an intracellular c-terminus. However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCKs may be used in the identification of their endogenous ligands, and to screen potential GPCE adjoints and antavousists for use as pharmaceutical agents. The proteins may also be used in the study of GPCR-mediated signalling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCKs may be used tor tissue localisation expression analysis to provide information about their function in healthy and pathological states.
                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                      length EST (expressed sequence tag) 764455 as a probe.
The orphan GPCP of the invention, like all GPCPs has seven transmembrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        orphan G protein coupled receptor (GPCP), expressed in left and right cerebellum, kidney and lung. The hCHN8 cDNA was identified using full
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present amino acid sequence is the hCHN8, an endogenous human orphan G protein coupled receptor (GDCP), expressed in left and right
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 62; Page 82-83; 102pp; English.

                                                                                                                                                                                           The 15625 receptor protein polynucleotides are useful for generating probes, primers and antisense constructs. The polynucleotides encoding the 15625 receptor proteins can also be inserted into vectors to be used in gene therapy. The disorder that may be treated using the 15625 receptor protein polynucleotides and polypeptides include anaemia, neutropenia and thrombocytopenia.
                                                                                                                                                                                                                                                                              The present sequence shows the 15625 receptor protein, It is a novel of coupled profein receptor (GPCR). The CDNA for this protein was isolared by screening a human cDNA library with sequences homologous to other GPCRs. The 15625 receptor protein is expressed in the glial cells of the brain. It is also expressed in several other tissues. The 15625 receptor protein may be useful for producing antibodies which can be used to detect the presence of the receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   25 - NOV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 identifying an agent which is useful for modulating acute myocardial infarction, unstable angina, chronic stable angina, transient ischaemic attacks, strokes, peripheral vascular disease, precelampsia, deep venous thrombosis, embulism, dissentifated intravasculat coagulation, thrombotic thrombosis, embulism, dissentifated intravasculat coagulation, thrombotic restenotic complications following angioplasty, carotid endarterectomy, post CABG (coronary artery bypass grait) surgery, vascular grait surgery, stent placements or insertion of endovascular devices and prostheses. P2Y12 receptor is useful for identifying binding partners and for dagnostic applications. P2Y12 receptor provides targets for screening synthetic small molecules and combinatorial or naturally occurring compound libraries to regulate platelei aggregation, vascular injury, or disease as well as schizophrenia, eating disorders, depression, migraine and other brain disorders. The present sequence is human P2-purineratic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    as P2Y12 receptor and its corresponding cDNA molecule. P2Y12 receptor is the subtype of P2-purincryic receptor. The P2Y12 receptor is expressed selectively in the platelets and brain, and couples to a pertussis toxin sensitive G protein (Gi). P2Y12 receptor is a G protein coupled receptor that responds to ADP. The invention also relates to a method for that responds to ADP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 1; Fig 5A; 108pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hollopeter G;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The 1952's receptor protein is a novel 6-coupled protein receptor (GPCR). The CNNA for this protein was isolated by screening a human CNNA library with sequences homologous to other GPCRs. The 19625 receptor protein is expressed in the glial cells of the brain. It is also expressed in serveral other tissues, the 1962's receptor protein may be useful for producing antibodies which can be used to detect the presence of the
                                                                                                                                                                                                                                                                                                                                                into vectors to be used in gene therapy. The disorder that may be treated using the 15625 receptor protein polynucleotides and polypeptides include anaemia, neutropenia and thrombocytopenia. The
                                                                                                                                                                                                                                                                                                                                                                                                      receptor protein. The 15625 receptor protein polynucleotides are useful for generaling probes, primers and antisense constructs. The polynucleotides encoding the 15625 receptor proteins can also be insert
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; 3 protein coupled receptor; GPCR; 15625 receptor protein; 41ial cells; spleen; colon; liver; brain; T cell; heart; red cell; thymus; B cell; pancreas; disorder; chromosome 3;

thromborytopaenic purpura or a bleeding disorder; thrombotic and restenotic complications following angiopiasty, carotid endarterectomy

(coronary artery bypass graft)

sufferly, Vasculat

graft surgery,

infarction, unstable angina, chronic stable angina, transient ischaemic attacks, strokes, peripheral vascular disease, preeclampsia, deep venous thrombosis, embolism, disseminated intravascular coagulation, thrombotic that responds to ADP. The invention also relates to a method for identifying an agent which is useful for modulating acute myocardial

selectively in the platelets and brain, and couples to a pertussis toxin-sensitive G protein (GI). FIYIZ receptor is a G protein coupled receptor as P2Y12 receptor and its corresponding cDNA molecule. P2Y12 receptor i the subtype of P2-purinergic receptor. The P2Y12 receptor is expressed

The invention relates to ADP (adenosine 5'-diphosphate) receptor, termed

Example 1; Page 84-85;

P2Y12 receptor provides targets for screening synthetic small molecules and combinatorial or naturally occurring compound libraries to regulate platelet aggregation, vascular injury, or disease as well as schizophrenia, eating disorders, depression, migraine and other brain disorders. The present sequence is a fragment of human P2-purineraic receptor subtype, referred as P2Y12.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                rne invention relates to ADP (adenosine 5'-diphosphate) receptor, termed as P2Y12 receptor and its corresponding cDNA molecule. P2Y12 receptor is the subtype of P2'-purinergic receptor. The F2Y12 receptor is expressed selectively in the platelets and brain, and couples to a pertussis toxin sensitive G protein (G1). P2Y12 receptor is a G protein coupled receptor that responds to ADP. The invention also relates to a method for identifying a perturbation and coupled as to ADP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             synthetic small molecules and combinatorial or naturally occurring compound libraries to regulate platelet aggregation, vascular injury, or disease as well as schizophrenia, eating disorders, depression, migraine and other brain disorders. The present sequence is rat P2-purinergic receptor subtype, referred as P2Y12 receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            thrombocytopaenic purpura or a bleeding disorder, thrombotic and restenotic complications following anglopiasty, calotid endarterectomy, post CABG (coronary artery bypass graft) surgery, vascular graft surgery, stent placements or insertion of endovascular devices and prostheses. P2Y12 receptor is useful for identifying binding partners and for diagnostic applications. P2Y12 receptor provides targets for screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        identifying an agent which is useful for modulating acute myocardial infarction, unstable angina, chronic stable angina, transient ischaemic attacks, strokes, peripheral vascular disease, precelampsia, deep venous thrombosis, embolism, disseminated intravascular coaquiation, thrombotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 14; Page 81-82; 108pp; English.

In situ hybridisation analysis showed that MP-10 receptor mRNA is expressed diffusely but abiquitously in the adult rat central nervous system (CNS). The mRNA was also found in adult rat spleen. MP-10 receptor protein contains several structural features characteristic of a 6 protein coupled receptor (GPCR). MP-10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   receptor protein is useful for identitying new anaesthetic and analgesic agents. Such agents may be identified using assays designed to detect agentists capable of binding to the receptor, therefore modulating intracellular signalling.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N PSDH: AAA48642
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1: Fia 2: 28pp: English.

identifying an agent which is useful for modulating acute myocardial infarction, unstable angina, chronic stable angina, transient ischaemic attacks, strokes, peripheral vascular disease, precelampsia, deep venous thrombosis, embolism, disseminated intravascular coagulation, thrombotic thrombotytopacnic purpura or a bleeding disorder; thrombotic and restenotic complications following angioplasty, carotid endarterectomy, post CARG (coronary artery bypass grait) surgery, vascular grait surgery, stent placements or insertion of endovascular devices and prostheses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to ADP (adenosine 5'-diphosphate) receptor, termed as P2Y12 receptor and its corresponding (DNA molecule, P2Y12 receptor is the subtype of P2-purincergic receptor. The P2Y12 receptor is expressed selectively in the platelets and brain, and couples to a pertussis toxin sensitive G protein (Gi). P2Y12 receptor is a G protein-coupled receptor that responds to ADP. The invention also relates to a method for
                                                                                                                                                                                            P2Y12 receptor is useful for identifying binding partners and for diagnostic applications. P2Y12 receptor provides targets for screening synthetic small molecules and combinatorial or naturally occurring
Sequence
                                                         receptor subtype, P2Y12 truncated allelic variant. The variant is obtained by deleting two bases 'CA' from position 789-790 of the wildtype numan P2Y12 receptor cDNA, resulting in amino acid changes from position
                                                                                                                             compound libraries to regulate platelet aggregation, vascular injury, or disease as well as schizophrenia, eating disorders, depression, migraine and other brain disorders. The present sequence is human P2-purinergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 29; Page 91 92; 108pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  modulate SECX expression (e.g., using antisense oligonucleotides). SECX nucleic acid sequences are also useful for identifying a cell or tissue type in a biological sample, and in forensic biology. SECX primers or probes are useful for detecting the presence of SECX nucleotides and for screening tissue cultures for contamination. Diseases that may be treated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cellular differentiation and cell survival. SECX nucleotides are useful for the recombinant expression of SECX protein, and may be used detect SECX mRNA or genetic lesions in the SECX gene. They may also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   levels of SECX proteins and nucleotides. The SECX proteins are also useful to screen compounds that modulate SECX activity or expression. The interaction of a SECX protein with other cellular proteins may be useful to modulate the activity of a partner protein, cellular proliferation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              or prevented using SECX proteins or nucleotides include cancer (e.g., colorectal carcinoma, prostate cancer), benign tumours, immune disorders (including autonomous diseases, transplant rejection, allorgies, AIDS), infections, inflammatory disorders, arthritis, haematopoietic disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              skin disorders, cardiovascular disorders, atheroselerosis, restemosis, neurological diseases (e.g., Alzheimer's disease), trauma (e.g., surgical or traumatic wounds, spinal cord injury), and skeletal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               disorders
                                                                                                                                                                                                 Human; G protein coupling receptor; CNS; central nervous system.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      lamily and a method for screening using the receptor. The invention be used for screening of agents expected to be useful for prevention and treatment of central nervous system (CNS) diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a novel C protein coupling receptor, a demonstrating for the receptor family, a process for preparation of the receptor family, an antibody to the receptor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Transmembrane_domain_(4TM)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Transmembrane_domain_(3TM)
```

Seven transmembrane receptor polypeptides and polynucleotides, useful tor treating neurological or psychiatric disorders, e.g. schizophrenia, for identifying compounds useful for treating schizophrenia

Claim 1; Page 10-11; 215pp; English

is also useful for identifying compounds useful for treating schizophrenia. These compounds are also useful for treating other neurological and psychiatric diseases, e.g. depression, anxiety, bipolar disease, affective disorders, attention deficit hyperactivity disorder/ attention deficit disorder, epilepsy, neuritis, neurasthenia, neuropathy, neurosis, Alzheimer's disease, Parkinson's disease, migraine and senile dementia. The invention also provides genetic screening procedures that entail analysing a person's genome with respect to GPCR. The vectors are useful for the recombinant production of the GPCR's. The present sequence is human CON203 G protein coupled receptor (GPCR) protein. The invention relates to human G protein-coupled receptor (GPCR) and their corresponding DNA molecules. GPCR is also referred as seven transmembrane receptor. G protein-coupled receptor protein is useful for treating neurological disorder, particularly schizophrenia. GPCR protein
